

ALLEGATO 1

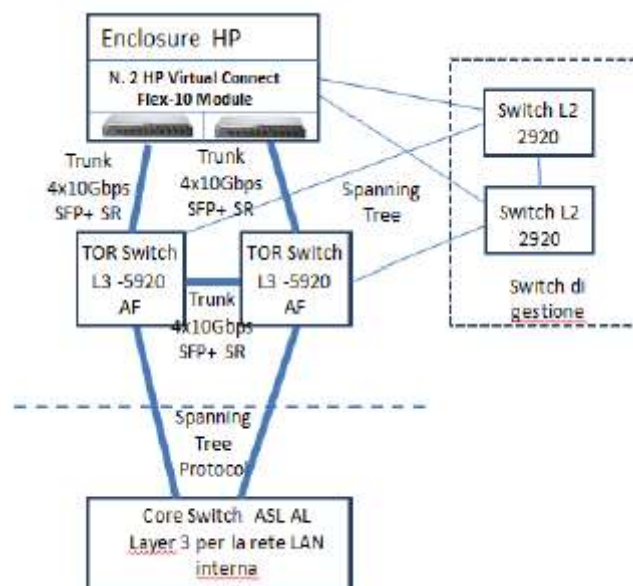

**Allegato Tecnico: descrizione della
situazione attuale relativa all'infrastruttura
dei Data Center di ASL ALESSANDRIA al
31.10.2022**

AS-IS Infrastruttura Server e storage ASL AL

ASL Alessandria eroga i servizi su tutto il territorio in maniera centralizzata: l'utilizzo delle applicazioni, dei database e dello storage NAS è gestito attraverso 2 siti connessi in modalità workload-balanced attraverso un trunk FC da 40 Gbps per la parte elaborativa e 4 link in fiber channel da 16Gbps per l'interconnessione tra gli storage.

Ogni enclosure HPE C7000 contiene N.8 blade HPE BL460c Gen9 con 256 GB di Ram e N.2 socket con 8 core ciascuno fornendo complessivamente per l'ambiente VMware una capacità elaborativa di 128 core e 2TB di Ram. Incluso nel enclosure, per ogni sito troviamo un blade per il cluster fisico database HPE BL460c Gen9 con 528 GB di Ram e 2 socket CPU con 10 core ciascuno.

Inoltre, sussiste anche un cluster windows per la gestione dei backup per i database Oracle e un ulteriore server separato per la gestione dei backup dei virtual server che insistono sull'infrastruttura.

Come detto la modalità di lavoro dei due siti è workload-balanced per cui la diponibilità computazionale è doppia. L'ambiente virtualizzato può arrivare ad utilizzare complessivamente più di 160 VM per ogni CED. (riferimento basato su server di media dimensione 4 VCPU 8GB RAM).

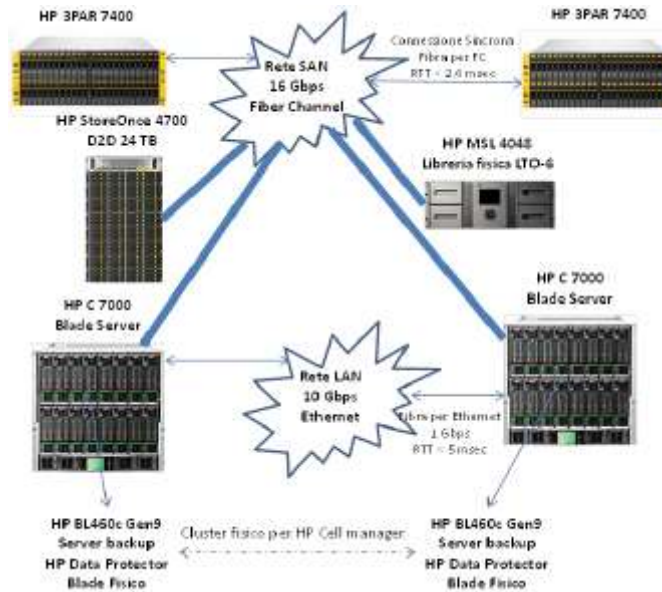

Lo storage è composto da 2 HPE 3PAR StoreServ 8400 in replica sincrona; viene utilizzata la tecnologia peer-persistence per cui anche lo storage lavora in modalità active-active (workload-balanced).

I 3PAR sono configurati con meccaniche 3 tier: HDD fast class per le applicazioni "mission critical" che richiedono performance elevate da 600GB, HDD near line da 4TB e HDD near line da 6TB per l'archiviazione dei dati. Per gli HDD fast class la capacità massima è di 45TB netti, mentre per i near line la capacità è di 60TB netti.

Il backup dell'infrastruttura è affidato ad una libreria virtuale HPE Store Once sia per le applicazioni provenienti da VMWare mediante il software HPE Recovery Manager Central che per i database Oracle mediante il software MicroFocus Data Protector. L'appliance StoreOnce contiene nativamente un algoritmo proprietario che comprime e crypta i set di backup.

Solo per la parte database, oltre al backup su Store Once, viene eseguita una seconda copia su libreria fisica HPE MSL4048. Store Once e MSL4048 sono rispettivamente installate presso il CED Venezia e il CED Spalato.

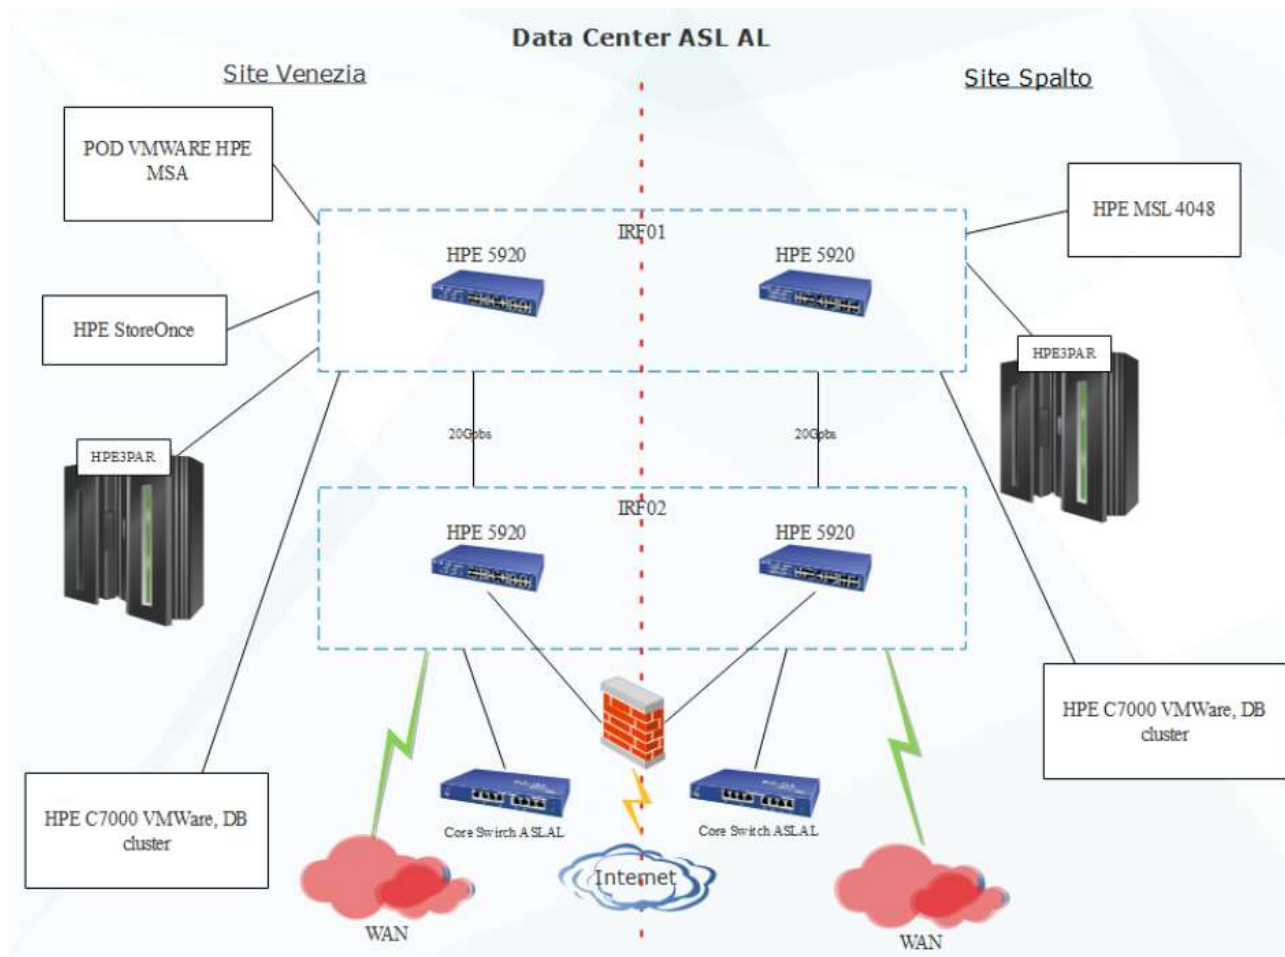

Per l'ambiente virtuale viene utilizzato VMWare (attualmente installata la versione 7).

Nel sito Venezia è installato un sistema POD che contiene tutte le macchine di management per la gestione dell'infrastruttura e tutte le macchine di test database e applicativo

Lo schema a blocchi complessivo risulta essere il seguente

Di seguito il dettaglio di tutti i componenti hardware, software e di manutenzione dell'infrastruttura:
